

Carbon Reduction Plan - Upholstery2U Ltd

August 2025:

At Upholstery2u, we're committed to sustainability. We offer professional reupholstery services, (both mobile and in-house options), designed to meet the unique needs of businesses across various sectors.

By reusing, recycling, and repurposing materials whenever possible, we help extend the life of furniture and reduce waste. Our eco-friendly approach keeps well-loved pieces out of landfills, giving them a new purpose and a fresh lease on life.

Commitment to achieving net zero:

Upholstery2U Ltd is committed to achieving net zero emissions by 2050.

Baseline and current emissions footprint:

Our baseline emissions are a record of the greenhouse gases that were produced prior to the introduction of any monitored strategies to reduce emissions. Baseline emissions are the reference point against which future emissions reduction can be measured.

Baseline year: FY 01.11.23 - 31.10.24	
Additional details relating to the baseline emissions calculations:	
This is the first year of carbon reporting for Upholstery2U Ltd, and therefore forms the baseline year of emissions.	
There are no emissions to report at Scope 3, Category 9 as this category was not relevant to Upholstery2U Ltd activities in the baseline year.	
Emissions	Total (tCO ₂ e)
Scope 1	185.07
Scope 2	15.24
Scope 3 Cat 4 – Upstream Transport & Distribution Cat 5 – Waste Generated in Operations Cat 6 – Business Travel Cat 7 – Employee Commute	118.27
Total emissions	318.57

Emissions reduction targets:

In order to continue our progress to achieving net zero by 2050, we have adopted the following carbon reduction targets.

We project that carbon emissions will decrease over the next five years to 246.5 tCO₂e by 2029. This is a reduction of 23% against our baseline.

Progress against these targets can be seen in the graph below:

FACELIFTING FURNITURE FAST & FRIENDLY

Carbon reduction projects:

As this is the first year that Upholstery2U Ltd are recording and reporting their emissions, any previous carbon reduction projects have not been measured. However, the impact of these projects is ongoing as our business model has always encouraged repairing old equipment and furniture to stop unnecessary items going to landfill. Replacing worn-out gym equipment and furniture often results in unnecessary waste, contributing to the growing environmental problem of landfill overflow. Instead of discarding these items, we offer a sustainable alternative – reupholstery. Reupholstery requires significantly fewer raw materials and energy than manufacturing new equipment and furniture.

By reupholstering existing furniture and equipment, you not only save money but also help reduce waste and conserve resources.

As part of our sustainability efforts to date, we have replaced virgin plastic in our vans with fully recycled HDPE plastic – a material sourced from plastic bottles diverted from landfills. This innovative approach ensures that recycled plastic forms the foundation of all plastic components used in our vans.

Future carbon reduction initiatives:

In the future we hope to implement further measures such as:

- Continuing to regionalise the Upholsterer workforce – reducing the need for additional travel to the office/workshop.
- Establishing our own waste disposal routes from our office/workshop (separate to our landlord), to ensure waste is recycled or diverted to energy from waste plants, rather than landfill.
- Improve our data collection processes to increase the accuracy of our carbon reporting.
- Considering the electrification of mobile workshops.
- Offsetting our emissions as appropriate.

Declaration and sign off:

This Carbon Reduction Plan has been completed in accordance with PPN 006 and associated guidance and reporting standard for Carbon Reduction Plans. Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard and uses the appropriate government emission conversion factors for greenhouse gas company reporting.

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements (where required), and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed: Adam Smith
